What Is Reverse Osmosis (RO)?

Reverse osmosis is a separation process that utilizes a semipermeable membrane to remove 90% to 99% of the impurities in drinking water.

What Is Ultra Violet (UV) Purification System?

A UV water purifier treats micro-biologically unsafe water with germicidal ultraviolet light. The UV wavelength scrambles the DNA of living organisms in the water so that they can no longer reproduce and make you sick. If you drink bacteria-infested water, the organisms can embed in your digestive tract and replicate. Ultraviolet radiation renders bacteria, viruses, parasites, and fungi unable to replicate by damaging the nucleic acids of their DNA.

Tomlinson® Drinking Water Faucets

Before you invest in a Water Purification System, you want to ensure that the faucet you install is not only attractive but also constructed with lead-free materials. Most of Tomlinson's Drinking Water Faucets are NSF/ANSI 61-9 & 372 certified and in compliance with the Safe Drinking Water Act (SDWA).

Just as important as the quality of our faucets' internal construction is our ability to create faucets that enhance the style and function of virtually any kitchen design. Tomlinson offers a variety of styles ranging from Vintage to Ultra Contemporary in an appealing choice of finishes. Since it is the most visible component of a drinking water system, your faucet becomes a statement of your personal style.
